Services

Dr. Boulet is a licensed Alberta Optometrist and is a primary care doctor for diagnosis and treatment of eye disease and visual disturbances. He also offers specialized services in the diagnosis and treatment of vision-related development and behaviour concerns. Dr. Boulet also offers public and professional education and training, and consultations to schools regarding vision management and optimization of the learning environment to reduce operating costs due to learning and reading disabilities.

Specialized Services in Learning and Vision Assessment and Therapy

1. Diagnosis of vision-related learning and reading concerns.
2. Consultation for infant and child strabismus (eye turns) and amblyopia (so-called 'lazy eye').

3. Treatment plans for children with behavioural and developmental concerns in the classroom.
4. Help with acquired and traumatic brain injury.

Referral Process

Dr. Boulet accepts self-referrals and referrals from other doctors. The referral process requires:

1. Book and appointment at either North or South offices. Fees for consultation services are to be paid at the time of booking. The appointment cannot be held without payment.
2. Copies of relevant education, psychology, optometric, and medical reports are to be forwarded to the clinic at or before the time of the consultation appointment.
3. Consultation appointments are generally one hour in duration and will often involve a 'dilated' eye exam as well as other functional tests of vision, motor control, movement, and balance.
4. Reports are generally produced within two weeks of the consultation and provide specific recommendations for intervention that include solutions provided by Dr. Boulet as well as his colleagues working in related fields.

There are fees for consultation and report writing. Please contact the office for current rates. The consultation fee does not include costs of treatment.
